

## Genuine Implantiem Fully customised abutments – NOW AVAILABLE

Fully customised abutments, produced from Snucone Ti-Blanks

The custom abutments are produced from ti-blanks with the original Snucone connections. Implantiem UK has invested in a lab milling machine which is housed and managed by a well-established production centre name Zfx Birmingham Ltd.

Zfx can provide a scanning & milling service or a milling-only service. They can also help with solutions for digital library issues using Exocad and can provide digital analogue models.

Designed abutments, intraoral scans or physical models can be sent to Zfx so they can create your fully customised Snucone abutment. Please ensure that you supply the exact requirements with the digital files or models sent and a patient reference.

Printed models and abutment fitting jigs can also be provided by Zfx upon request.

The turnaround time for a fully customised abutment is typically 48 hours.

### The process

Send the design files or models to Zfx.

Users can send their construction and .stl files for manufacture.

**For exocad this includes:**

*.constructioninfo file*  
*.dentalproject file*  
*.stl file*

**For 3 shape this includes:**

*.3ox*  
*.pts*  
*.stl*  
*.abutmentbase*

### Invoicing

The fully milled custom abutment is **£90**. This will be invoiced by **Implantiem**, and you can specify if you want this to be charged to a dentist's account or on your lab account depending on your agreement with the practice.

Any additional work completed such as abutment fitting jigs, models etc. will come at an **additional charge** and this will be invoiced by **Zfx**.
